

PetroVue Digital Well File™ (DWF)

A whole new level of efficiency

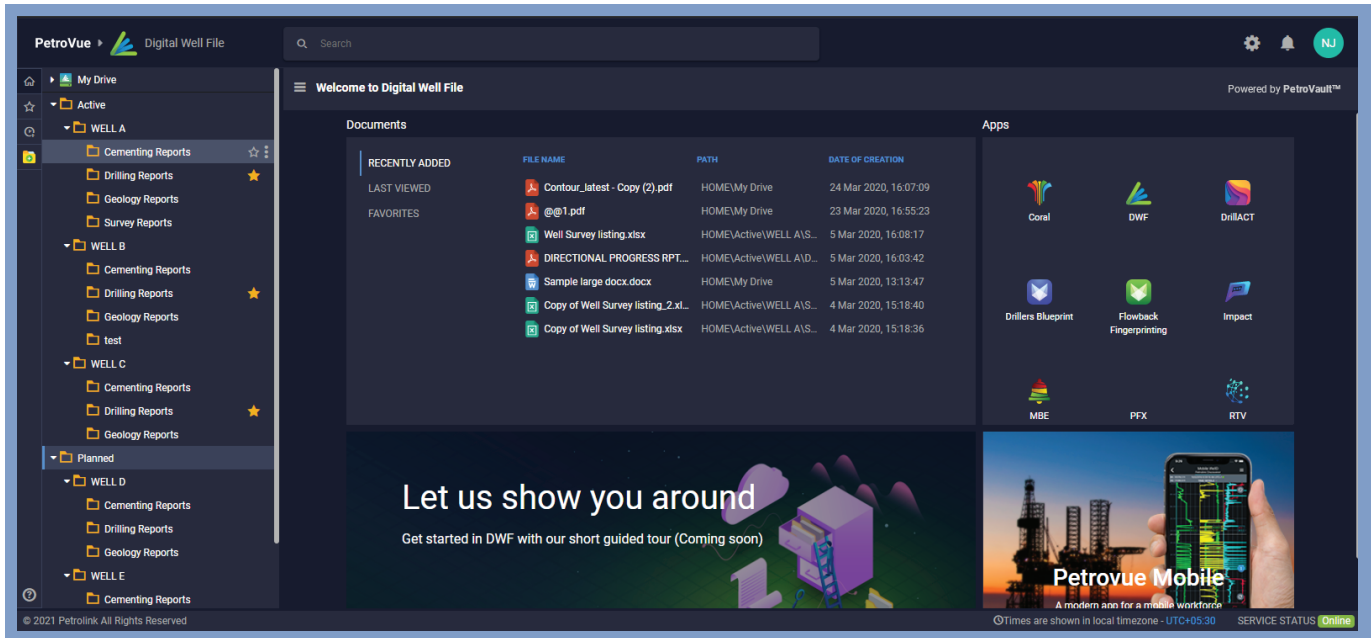

Work smarter

*How often have you wondered – “Is this the latest report?”
“Which of our partners are still on the distribution list?”*

In today’s hectic and always-on energy environment, the data that is produced from your asset is endless. You need a solution that will enable you to get value from your data, inform your decisions and maximize your productivity. What if there was one repository for all your static well data, where you could upload, organize and share data across the whole well life cycle, from Exploration to Production? Well, now there is.

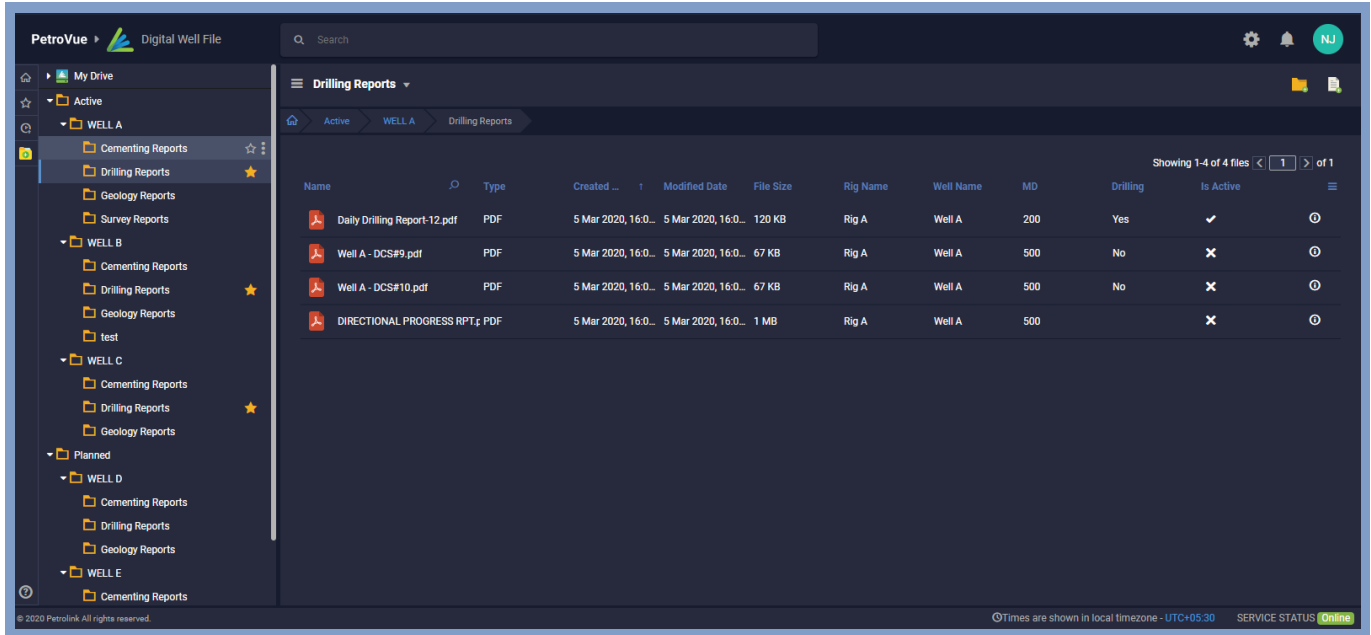

Petrolink has been the market leader in static data management for decades. Our experience and innovation zeal coupled with the latest technology has resulted in the production of the newest version of Digital Well File - a system that raises document management to a whole new level.

Digital Well File makes data easy to find and share across all parties involved in the drilling process. The platform automatically categorizes, organizes and archives data from multiple rigs and wells, contractors and consultants in a central repository. Its web-based infrastructure and compatibility with cloud architecture allows for your data to be easily accessed and distributed from anywhere, on any device. With data that is easy to find and share, everyone has what they need to make the right decisions and unlock their data potential.

A lot of valuable data is produced every day from well plans to geological reports to cement programs or lookaheads, and the list continues to grow. Much of this data can slip through the cracks, often being misclassified, duplicated or lost. Ever had to hit the re-call email button? You are not alone. Mistakes like this happen every single day. With DWF you can distribute reports to the right people every time.

*“One of your rigs produces terabytes of data everyday.
How much are you capturing?”*

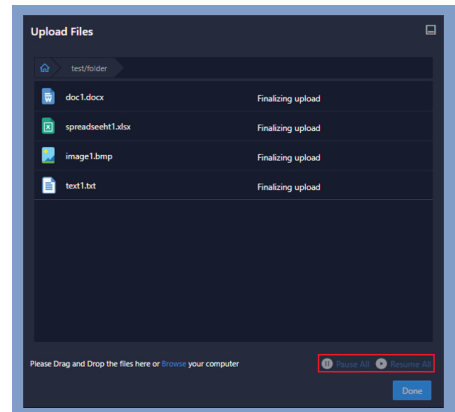

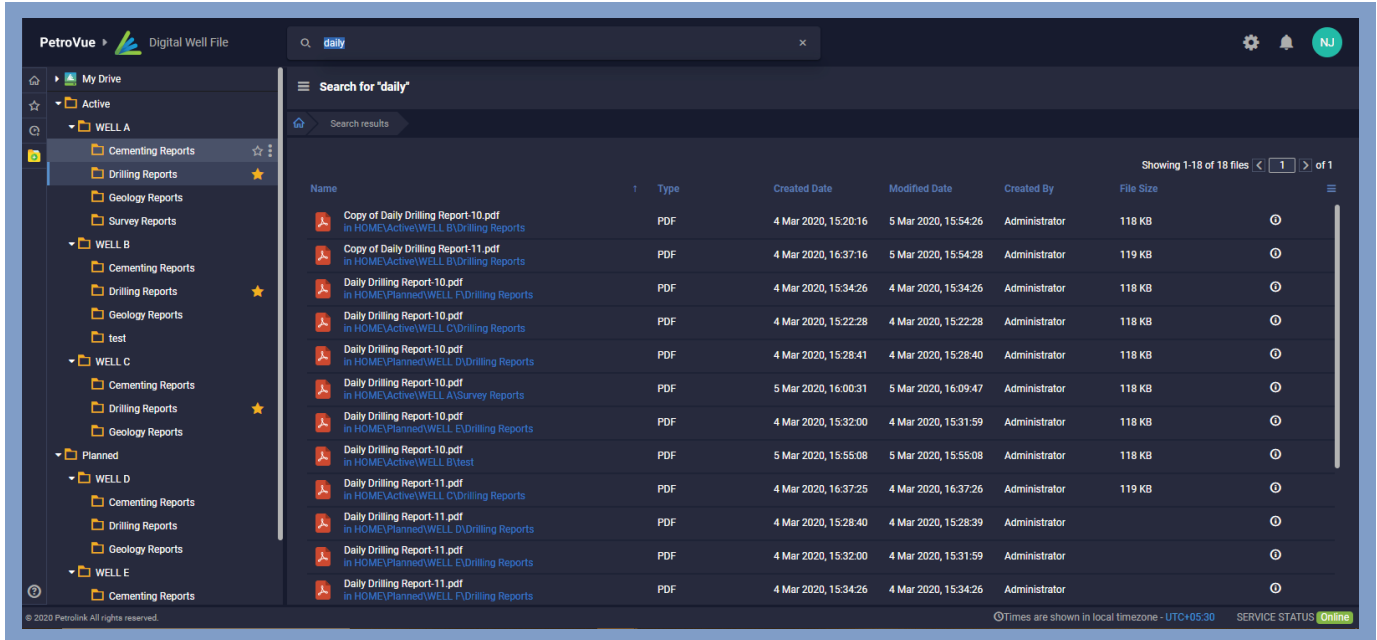

To mine your data efficiently and to ensure the right decisions are made, it is vital to keep your data safe, organized and accessible.

Knowing that your most important files are safe can give you great peace of mind and allow you to focus on your day-to-day operations. DWF also respects the confidentiality of your files and has a battle-tested access management system to ensure your data is delivered to the right people at the right time.

Features

- SFTP compatible.
- Allows download of multiple files together.
- Enables simultaneous upload of multiple files with pause and resume features so you can prioritize.
- Preview of different types of files (PDF, Excel, Word, images, text, CSV, mp4 and LAS).
- Time zone saver - Your people work all over the world, set your preferred time zone and retain login after login.
- Confirmation messages before copying, moving, or deleting content.
- Enables editing of metadata in a single window.
- Dedicated personal space to store your confidential files.
- Mark folders as favourite.
- Drag and drop feature.
- Subscribe to notification - So you know when a file or folder is added or removed.
- Highly Secure - Security features like custom access management and two step verification.

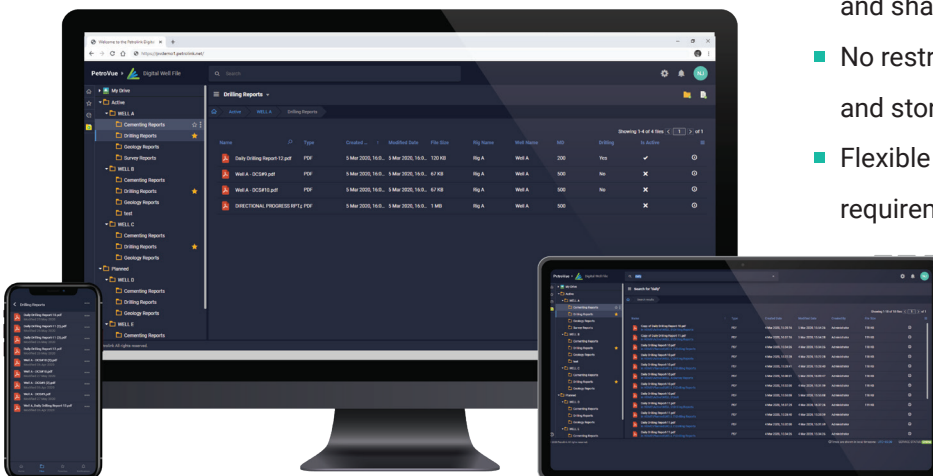

Benefits

- Easy to find data from multiple wells, contractors, and consultants – everyone working from the same information.
- Web-based - no need for software installation.
- Subscription based notifications – never miss an important action on your folder.
- Cross-platform – access your data anywhere, on any device.
- Petrolink verifies the accuracy of your data – providing quality control of content.
- Customized meta tags – improved search and sorting to match your corporate database.
- Auto downloads to the corporate file share.

- Mobile-responsive view that lets you consult and share your files from any location.
- No restriction on the types of data loaded and stored.
- Flexible and adaptable to your workflow requirements.

FAQ's

Can I control the access groups and give specific permissions by group?	Yes, multiple groups can be setup and given specific access to different data.
Which browsers does DWF support?	DWF supports Google Chrome and MS Edge (Chromium) and these are the recommended browsers.
Are my files secure?	DWF has a robust access management system, you can rest assured no one can access your files without your permission.
Can I share direct download links of the files over email?	Yes, DWF allows you to copy and share the direct download links through your email, Microsoft Teams, Slack or any other official communication channel.
Will DWF work on my mobile device?	Absolutely. You can access your folders and files over your mobile device on the move.
Can I use DWF to store my personal files as well?	Yes, DWF has a dedicated 'My Drive' space for each user. You have full control over this space and other users cannot view what you store there.
Will I be notified if any new document is added to the folder I am watching?	DWF allows you to subscribe to email/SMS alerts for any action on your folders or files.
Is there any restriction on the number of folders?	No, there is no limit, however, it will depend on the amount of resources in the server on which DWF is hosted based on your contract terms.
